

## HOW AND WHERE TO GET AN HGH PRESCRIPTION ONLINE

The internet has changed the way in which people can find and access information about nearly any topic, including how to get an HGH prescription online. That makes it important to understand what to look for when visiting a website for this purpose.

1. You cannot buy legal human growth hormones over the internet. Companies selling drugs online without a prescription are breaking the law. If you look close enough, you will notice that these businesses are typically located in foreign countries; if there is even any address at all. Please be advised that the NABP – National Association of Boards of Pharmacy – **reviewed over 105,000 websites selling drugs**, and only 3% were found to be following all legal and safety guidelines.
2. Blood testing and physical examination are required, and that cannot be done online. A face to face visit with a doctor is mandatory before treatment with prescription HGH injections can be provided.

That does not mean that the internet cannot be used for finding the best clinic for one's needs. That is how information is often derived. The doctors at National HRT® can provide a way that is better than spending hours of time sitting in a physician's waiting room.

[Our clinical advisors](#) will conduct all consultations over the phone – and this service is entirely complimentary. Blood testing will be arranged at a local laboratory, and you can choose any doctor to visit for your physical examination. The required health questionnaire can be accessed through this website. This is the only safe method of getting a human growth hormone prescription online.

This will save time and money while still providing the finest quality care and treatment at all times.

## WHAT TYPE OF HGH DOES THE DOCTOR PRESCRIBE?

Doctors specializing in growth hormone therapy will prescribe HGH injections. This is the best method of raising GH levels in the body. The molecular structure of HGH does not allow it to enter the body through the skin or even oral or nasal membrane. The only way into the bloodstream is via injection.

### **Is there a particular HGH prescription name that is best?**

Our doctors recommend the following brands of HGH:

- Humatrope
- Omnitrope
- Genotropin
- Saizen
- Norditropin

That is another reason why it is important to know how to obtain HGH legally – some companies sell inferior brands because they can purchase them at a very low cost and make more money by charging higher prices.

## HOW IS THE COST FOR THE HGH PRESCRIPTION DETERMINED?

Hormone specialists determine HGH prescription cost based on the following factors:

1. Which brand of HGH is selected
2. The style of injectable chosen for use – vial/syringe, injector pen, single dose pre-filled syringes
3. The dosage of medication prescribed
4. Frequency and duration of treatment

Once these factors are ascertained, an accurate cost of HGH treatment can be provided.
